Fleet Web Release Notes

7th November, 2022

Latest update offers improvements, bug fixes, and better performance

Improvement:

Following improvements have been made on Classic Fleet:

- To improve vehicle-level alerts and decrease non-monitoring alerts from the account, alerts associated with vehicles are now deleted when a vehicle is deactivated from the account. Additionally, an updated warning message is now displayed while deactivating a vehicle.

Improvement

To improve vehicle-level alerts and decrease non-monitoring alerts from the account, alerts associated with vehicles are now deleted when a vehicle is deactivated from the account. Additionally, an updated warning message is now displayed while deactivating a vehicle

Previously, when vehicles are deactivated from the account the vehicle-level alert associated with the vehicle was retained and this alert did not monitor any vehicles. To reduce these non-monitoring alerts, now when a vehicle is deactivated the alert associated with the vehicle is also deleted when there are no vehicles to monitor. Below is the updated warning message with the note.

Updated message : **Once you deactivate the vehicle, it will not appear in the maps or reports any more, any alerts defined for this vehicle will also be blocked.**

Note: The alert will also be deleted if it doesn't have any other vehicle to monitor

*Note: This feature improvement has now been implemented on **Classic Fleet**.*
