

# Fleet Web Release Notes

6th February, 2023

**Latest update offers improvements, bug fixes, and better performance**

## Major Feature Release:

- ELD Solution is now available for Canadian customers, for more information on ELD Canada solution, please [click here](#).

## Improvements:

Following improvements have been made on Classic:

- The 'PTO Started' event is now featured in Webhooks.
- The 'PowerTakeOff' event has been renamed as the 'PTO Ended' event. This is reflected on Live Maps, Breadcrumb, WWW reports, and PTO reports. This enhancement was made in response to user input.

## Fixes

- Minor bug fixes and performance enhancements.

# Improvements

The 'PTO Started' event is now featured in Webhooks, while the 'PowerTakeOff' event has been renamed the 'PTO Ended' event. The same information is now featured on Live maps, Breadcrumb, WWW reports, and PTO reports. This enhancement was made in response to user input.

Previously, only the 'PowerTakeOff' event, that is 'PTO Ended' event was available in the Webhooks event and displayed as a 'PTO Triggered' event in Live maps, Breadcrumb, and WWW reports.

We have now added a new event 'PTO Started' as part of Webhooks and renamed the 'PowerTakeOff' event to 'PTO Ended', replacing the 'PTO Triggered' event on Live maps, Breadcrumb, and WWW reports.

In PTO reports under the Reports module, we have added an additional column 'PTO Started Time', and renamed 'PTO Time' to 'PTO Ended Time'.

Webhooks

Cancel

Webhooks are HTTP callbacks that are triggered on this page along with performance metrics.
